Anatomy of a round	A boxing round lasts for either a 2 min or 3 min. Between each round there is a rest period which is either 30 seconds or 60 seconds. Before end of each round, a warning bell will sound 30 seconds before the round ends.
Timer Specification	Timer that was referenced for this program is the “TITLE Classic Pro Gym Timer” model (SKU: CDGT)

Sheet Name	Sheet Description
Rounds	Table showing the final time table of each round. Identifying the timestamp of when the rounds start and end as well as the warning bell time.
Raw_Times	Detailed time table that identifies each event which was processed from the audio file. Includes additional information that can be used for debugging purposes

Sheet Name	Column Name	Column Description
Rounds	Round	Round number that starts from 1 and increases by 1.
Rounds	TimeStamp	Time Stamp of the bell using the HH:MM:SS format.
Rounds	BellType	Type of bell that was recognized. One of 3 bell types exists; Start, Warning, End.
Rounds	SecondsFromLastBell	Seconds from the last bell that was identified.
Raw_Times	Type	The type of event that was identified from the audio file. (See table below).
Raw_Times	Seconds	Second that corresponds to each event.
Raw_Times	Formatted_Time	Converts the column “Seconds” into HH:MM:SS format.
Raw_Times	Delta	Same as the column “SecondsFromLastBell” from the sheet “Rounds” (see above).
Raw_Times	Bell_Details	Bell type that was identified by the program. It would be either empty or the values that corresponds to the column “BellType” in sheet “Rounds” (see above).

Type	Type_Description
Start	Start of the audio file
End	End of the audio file
Bell	Bell that corresponds to either the start or the end of the round
Warning_Bell	Sound of the warning bell
Fixed_bell	Bell that was not picked up by the program but was inferred from the timing of the rounds
